

Block KON 6

Overview

Summary of Block KON 6

Block KON 6 is an onshore block in the northeast of the inner Kwanza Basin. It is a square block with an area of 1,024 Km². It borders Block KON 3 to the north on latitude 8° 58' 14", Block KON 7 to the east on longitude 13° 52' 11", Block KON 9 to the south on latitude 9° 15' 36" and Block KON 5 to the west on longitude 13° 34' 47".

The Tertiary filled Calomboloca Trough runs from north to south-west through Block KON 6. Either side of the trough, rafts composed of upper Cretaceous rocks can be found.

Block KON 6 is an underexplored area, with only four wells and no existing fields, however, it holds potential for future hydrocarbon discoveries. Hydrocarbon shows and light oil (found in Calomboloca-1) discovered in the pre and post-salt sections suggest that an active source kitchen is present. Calomboloca-1 proved the existence of a very thick pre-salt sedimentary package and excellent quality reservoir rocks in the post-salt.

The potential of this block is recognised by several leads, with an estimated total of 679 MMBO resources.
