

Block KON 7

Overview

Summary of Block KON 7

Block KON 7 is an onshore block situated on the eastern edge of the inner Kwanza Basin in northwest Angola, and is located on the eastern edge of the Aptian/Albian carbonate platform domain. The block has an area of 1207.86 Km². It borders Block KON 3 to the north on latitude 8° 58' 14", Block KON 6 to the west on longitude 13° 25' 11", Block KON 10 to the south on latitude 9° 15' 36". To the east of Block KON 7 lies exposed basement.

Exploration activity in the past was minimal and has focused more on the nearby Blocks KON 6 and KON 10. Potential exists in the Calomboloca Trough trend crossing the block in the southwest and in the yet unexplored pre-Aptian syn and early post-rift sequences.

The potential of this block is recognised by several leads, with an estimated total of 108 MMBO resources.
